

PHẠM HÙNG ĐỨC – FRONT-END DEVELOPER

Phone: 0961048969
Email: hungduc034@gmail.com
Date of birth: 03/04/1997
Address: Ha Noi, Viet Nam

OBJECTIVE

Desire to work in a professional environment to learn more work experience as well as improve my skills. From there, I can contribute a part to the development of the company more and more successfully. In the next 1-2 years, I will try my best to become an expert in information technology.

EDUCATION

Greenwich University 06/2016 – 12/2020
Major: Computer Science.
Degree: Second Class Honours (1st Division)

EXPERIENCE

LTS Group 05/2023 – Current
Role: Front-end Developer.
SYNODUS 04/2021 – 04/2023
Role: Front-end Developer.
On Job Training at FPT Software 03/11/2020 – 31/12/2020
Role: Front-end Developer.

SKILLS

Language: VueJS, NuxtJS, React native, JavaScript, TypeScript, HTML, CSS, SCSS, Bootstrap, BootstrapVue, TailWind, Tamagui
English: Strong ability to read and interpret English materials.

PROJECTS

Weather forecast software (12/2024 – 02/2025)
Position: Front-end Developer.
Team size: 5 – 7.
Description: The weather forecast software is an application that displays weather information for user-selected locations. It provides temperature details along with hourly, daily, and weekly forecasts. Additionally, users can view weather information through an interactive map, allowing them to monitor weather conditions and natural disasters worldwide.
Technology used:
- React native, Tamgui, rnmapbox.
- Git, Jira.

Safety solution system

(09/2023 – 10/2024)

Position: Front-end Developer.

Team size: 13 – 15.

Description: Safety solution system is a web-based solution designed to assist construction companies in adhering to safety protocols. It provides a comprehensive suite of features to manage various safety aspects, including incident reporting, corrective actions, toolbox talks, equipment management, safety lessons and SDS (Safety Data Sheets) management. The most prominent feature is form builder and data entry. It allows the Customer Support team to create unlimited custom forms for data collection and storage, such as quizzes, text input, file uploads, and personal information. Additionally, offline mode ensures that users can fill out forms even in areas without an internet connection, with all offline edits automatically synced once the network is restored. The application is built following Progressive Web App (PWA) standards, guaranteeing smooth and consistent performance across both mobile and web environments.

Technology used:

- .Net core API, SQL Server.
- VueJS, Axios, TypeScript, HTML, SCSS, bootstrap, bootstrap Vue, PWA.
- Azure DevOps.

Document Markups/Annotations

(06/2023 – 08/2023)

Position: Front-end Developer.

Team size: 5 – 6.

Description: Document Markups/Annotations is a feature that allows users to add marks/annotations to a document (PDF) and save new versions of that document. Develop the feature to add marks/annotations on documents (like Foxit Reader) and save new versions, ensuring the original document remains unchanged. Implement the function to insert images from multiple sources and manage document versions, including tracking edit history, discussion logs, and displaying changed versions. Design a mechanism to lock the document after approval, requiring users to create a new PDF file for any additional edits. Build an overlay view mode that allows users to display/hide, edit, or delete annotation layers independently; supporting the option to save as a flat file (merging all layers). Integrate the undo function, restore up to 10 previous versions, and support actions such as email, download, and print for the document.

Technology used:

- .Net core API, SQL Server.
- VueJS, Axios, TypeScript, JavaScript, HTML, SCSS, bootstrap, bootstrap Vue, SDK foxit.
- Azure DevOps.

Operating application

(10/2022 – 04/2023)

Position: Leader Front-end.

Team size: 8 – 10.

Description: Build a common management application for the Ministry of Home Affairs, integrating from many different applications. Users can add, edit, delete and customize the general information display layout to suit themselves. Users can view information and use functions of the

integrated components. The application also has utilities to help users manage and customize in the most flexible way.

Technology used:

- .Net core API, SQL Server.
- VueJS, Vuex, bootstrap, bootstrap Vue, Apexchart.
- Bitbucket, Jira.

Digital governance platform

(03/2022 – 10/2022)

Position: Leader Front-end.

Team size: 8 – 10.

Description: Build a common management application for the Ministry of Planning and Investment, integrating from many different applications. In the general information display screen, users can customize the displayed content by dragging and dropping the widgets they want. Administrators can also customize menus and assign permissions to other users. In addition to the information and functions of components such as document management, task management, public administration, petition reflection,... Users also have utilities such as interpreter, lunisolar calendar, phonebook electronics, to-do list,...

Technology used:

- .Net core API, SQL Server.
- VueJS, Vuex, bootstrap, bootstrap Vue, Apexchart.
- Bitbucket, Jira.

Labor export management application

(11/2021 – 02/2022)

Position: Front-end Developer

Team size: 8 - 10.

Description: Develop labor export management software. Users can manage profiles, and track trainees and foreign orders by adding, editing, and deleting. Registration forms can be customized according to user choices, thereby improving performance and user convenience. Users can assign trainees to appropriate orders and manage student records from the time they leave the country until they return home.

Technology used:

- .Net core API, SQL Server.
- NuxtJS, Tailwind CSS.
- Gitlab, Jira.

Management application

(07/2021 – 10/2021)

Position: Front-end Developer

Team size: 12 - 15.

Description: Build a drag-and-drop web application, customize the layout according to the user, and combine with event news and reports with charts. The application has the ability to customize the menu, display content, etc. Towards an application where users can control the information they want.

Technology used:

- .Net core API, SQL Server.
- VueJS, Vuex, bootstrap, bootstrap Vue, Apexchart.
- Gitlab, Jira.

Schedule Management Application

(04/2021 – 07/2021)

Position: Front-end Developer

Team size: 8 - 10.

Description: Build a web app for users to manage all kinds of work schedules, meeting schedules, work schedules, ... of individuals, agencies, capable of sending invitations to people in the agency to join meetings.

Technology used:

- .Net core, SQL Server.
- VueJS, Vuex, bootstrap, bootstrap Vue.
- Gitlab, Jira.
